

Ethan M Roberts

ethan.m.roberts68@gmail.com - [LinkedIn](#) - [Portfolio](#) - (949) 429-2766

Summary

Data scientist with experience building scalable data systems across startup and enterprise environments. Focused on statistical modeling, causal inference, and decision systems for product and business problems under uncertainty.

Skills

Languages & Libraries: SQL, Python, R, Pandas, Numpy, Scikit-Learn, NLTK, PyTorch

ML & Statistics: Machine Learning, Statistical Analysis, A/B Testing, Time Series Analysis, Deep Learning, Transformers, NLP

Tools & Business: Snowflake, Fivetran, AWS, ETL, Tableau, Process Optimization, Project/Team Management

Work Experience

Paramark - Founding Data Scientist - *San Francisco, CA* 05/2025 - Current

- Early technical hire in seed-stage startup, owning cross-functional 0→1 internal product and customer systems, increasing weekly customer deliverable throughput by 2x over last 6 months
- Design and analyze marketing incrementality experiments using power analyses and statistical rigor methodologies to support budget allocation decisions
- Build scalable ETL, EDA, ML workflows supporting multi-source customer datasets
- Hire, train, and mentor new engineers, and develop team processes and documentation

Georgia Institute of Technology - Instructional Associate - *Remote, CA* 06/2024 - 01/2026

- Teach graduate-level data science, machine learning, and business analytics concepts
- Curriculum development, grading, teaching, and MOOC operational support

Netbase Quid - Senior Business Analyst - *Santa Clara, CA* 11/2021 - 11/2024

- Identified inefficiencies in cross-functional forecast workflows through exploratory analysis and model deployment, improving finance forecast error from $\pm 16\%$ to $\pm 1.5\%$ and reducing manual efforts by 85%

iPayables, Inc - Revenue Operations Analyst - *Aliso Viejo, CA* 4/2019 - 10/2021

- Developed and implemented A/B testing for marketing assets, resulting in an increase of click-through rates from 5% to 13% on ads, and 15% to 22% on whitepaper campaigns
- Formalized GTM reporting and data storage, leading to a 20% increase in sales pipeline and 540% increase in leads

Projects

[Breaking Grad\(ients\)](#) - Evaluates Fast Gradient Sign Method attacks on benchmark models such as EfficientNet, Data Efficient Image Transformers, and a custom built CNN. We describe model evaluation, attack generation, and comparative performance analysis when discriminating between AI and naturally generated images.

[Pokemon Team Generator](#) - Utilizes APIs to gather detailed Pokemon data to vectorize, match, and rank semantic similarity to freeform user input in real time, generating a team of Pokemon. The project utilizes NLP techniques such as Term Frequency-Inverse Document Frequency (TF-IDF) and DistillBERT.

Education & Awards

Georgia Institute of Technology - Master of Science – Analytics

Brigham Young University Hawai'i - Bachelor of Science – Computer Science
